WEATHER OF CONCERN

Weather of Concern

- A winter storm will bring widespread precipitation to Northern California tonight into early Saturday. A few showers will linger over the mountains through early Sunday.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

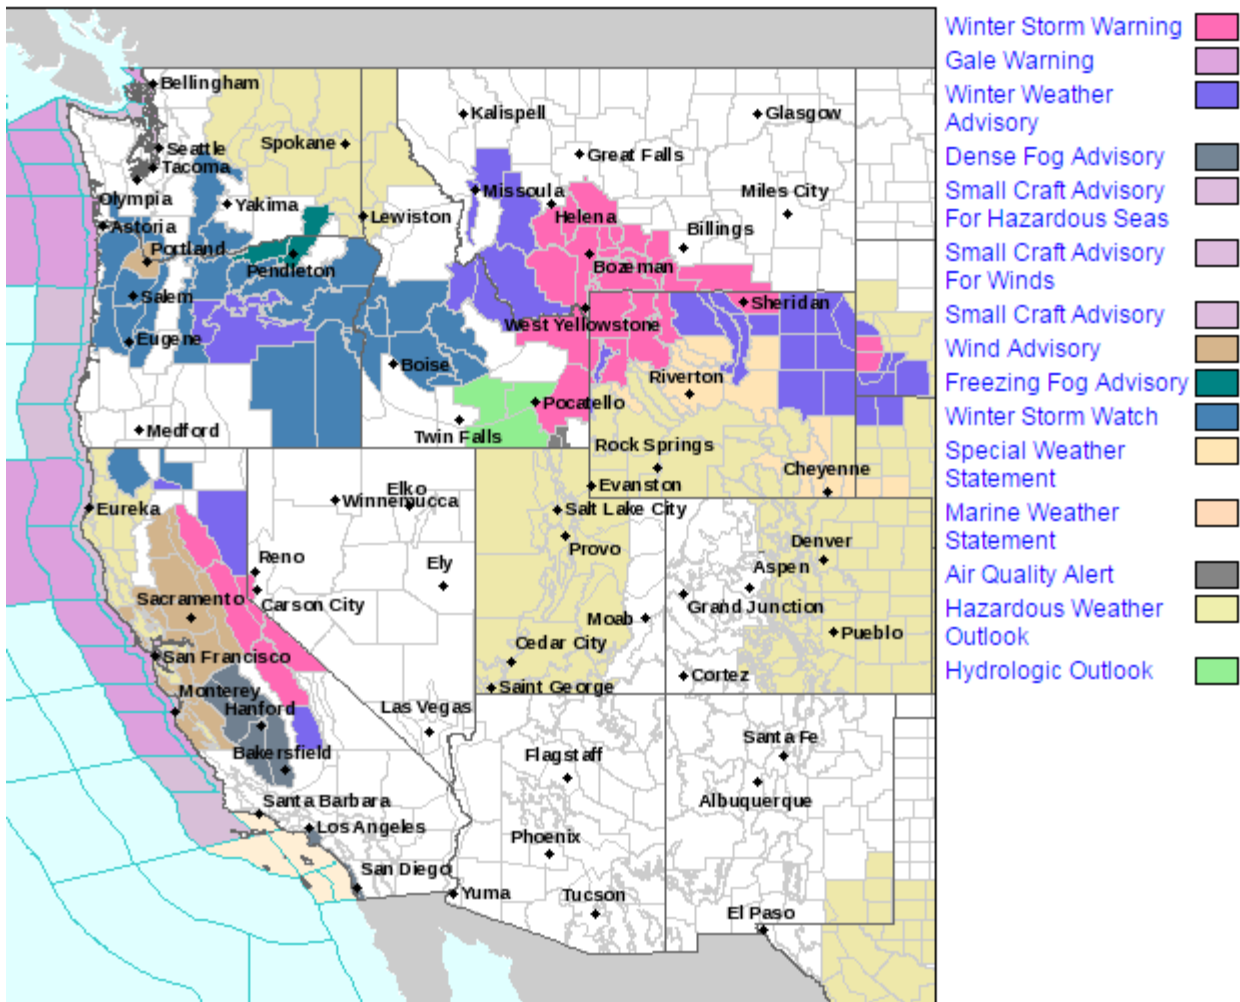

NORTHERN CALIFORNIA

High pressure will still be over Northern California, but a lot of cloudiness from an approaching off shore weather system will be spreading across the skies as well. The Pacific weather system will move ashore later today with precipitation starting overnight and continuing Thursday. Conditions will turn showery from the west Friday, but the steady precipitation is expected to continue for much of the day over the eastern mountains. Snow levels will generally be around 4500 feet in the north and 5500 feet in the south, but could drop to as low as 3500-4000 feet in the northwest Thursday into Friday and to around 4500 feet in the southeast Friday. Some gusty southerly winds will develop over the higher elevations Thursday with 30-50 mph gusts becoming possible Friday. The lower elevations will have lighter winds, mostly up to 15 mph with gusts up to 30 mph Friday. Unsettled weather will continue through the weekend into early next week with periods of precipitation. Snow levels should vary in about the same ranges as mentioned above.

SOUTHERN CALIFORNIA

A couple of Pacific storms will bring cooling starting today, with near normal temperatures Thursday through early next week. The first storm will bring showers to Central California starting Thursday morning. Showers will start across Southern California Friday morning. It still looks as though most foothill and mountain locations of Central California will receive between 1 and 4 inches of rainfall while most coastal and valley locations of Central California receive between a quarter inch and an inch of rainfall through Friday night. Southern California will receive less than a quarter inch of rainfall with this first storm. The snow level will be between 7,000 and 8,000 feet. A second storm will bring showers to the region again Sunday night through early next week. Once again, it looks as though Central California will receive much more rainfall than Southern California. Isolated showers will be possible across Central California this weekend in between storms. South to west winds of 15 to 25 mph with gusts to 40 mph will surface across the mountain ridges and desert passes Wednesday afternoon through Friday evening and then increase to 20 to 40 mph with gusts to 60 mph Sunday evening through early next week.
